TO WHOM SOEVER IT MAY CONCERN

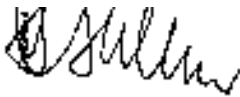

This is to certify that we have used different sizes of KITEC Pipes along with fittings from M/s. Pobbathi Agencies, Bangalore, for compressed air. water vacuum application extensively in our premiss. These pipes and Fittings varied advantages as mentioned below over conventional piping materials.

The process piping is jointless as the pipe is malleable to bend as desired. This helps in Faster and easier installation and eliminate fitting like bends, flanges etc. The installation infact is carried out by unskilled personnel after a demo by M/s. Pobbathi Agencies.

As the pipe's inner surface is smooth and non shredding, the transported material is Not contaminated. This aspect was adequately demonstrated in our compress air application,; The particle count of compressed air after 0.1 micron filtration and at the point use was Unchanged. The air quality achieved was of class 100.

KITEC pipes are suitable for high pressures and vaccum application also.
