TO WHOME IT MAY CONCERN:

It is certified that we have used Kitec Composite Pipe and fittings in our building of Shri Mata Vaishno Devi University, Kakril, Katra, Udhampur.

Our experience with this noble 21st. century piping system is excellent because of its numerous advantages over the conventional systems available in the market.

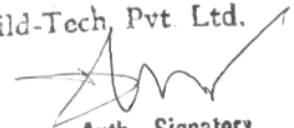

Kitec Composite pipes has been used for water lines, main rising, down take lines and hot & cold water supplies.

Kitec pipe being malleable (100mtrs. Length) can easily bend which avoids so many joints and because of smooth bends, friction losses are minimum with no hammerings. The other properties are no corrosion, no scaling (no bore loss), better insulation, hence very long life.

Since 2 years back kitec pipes have been used in above projects and its performance is satisfactory with no maintenance.

We suggest all fellow users to use this innovative piping system with trouble free life long service.
