TO WHOMSOEVER IT MAY CONCERN.

I am an enlisted Class E Contractor with Military Engineering Services, Belgaum and South Western Railways Hubli Division.

The day Kitec Composite Pipes were introduced to me, I was fascinated by the concept, the ease of installation, bendibility, the non permeability to pollutants, the long term benefits etc that I firmly decided to use Kitec Pipes for my G + 2 floor residential building. It has been 7 years that the installation has been operational and I am happy with the trouble free performance.

Being Military Engineering Services contractor, I have bagged a few contracts for both water supply lines in 3", 4" sizes as well as replacement of GI Pipes in the residential quarters. The installations have been successfully completed and there is no problem what so ever.

I had also bagged a contract with South Western Railways, Hubli Division, for replacement of GI Pipes with Kitec Composite Pipes at the railway's residential colony at Castlerock Railway Station. The job was successfully completed and the feed back from the occupants of this colony is very encouraging. In fact some of the occupants have asked me to regulate the flow of water as the pressure is very high.

I strongly recommend the use of Kitec Composite Pipes.
